

Creative Solutions

W

ho Is Creative Solutions?

Creative Solutions, Inc. is a cutting edge developer and publisher of Macintosh hardware and software products. We have been working with the Motorola 68000 and other high performance processors since 1979.

Although we are most known for our language programs, MacForth™ and Multi-Forth™, we publish a variety of software utilities and most recently a line of add-in boards for the Apple Macintosh computer. Printed circuit board design and production have become a major focus for CSI over the past 3 years.

Hurdler Add-In Boards for the Macintosh

Creative Solutions, is a pioneer in NuBus technology. We announced our first prototyping boards for the Macintosh II in August 1987. Since then we have expanded the range of products from prototyping boards for developers to a wide range of serial and parallel interface boards that connect the Macintosh II modular line to a wide range of popular printers, scanners, modems and other peripherals.

CSI supports the Macintosh SE/30 and new Macintosh IIfx computer with prototyping, and extender boards.

ROM development software tools aid in development and accelerate the learning curve for NuBus applications. Also ask about our custom hardware design and production services.

A partial list of CSI hardware products follows:

- Intelligent Serial boards (two or four ports per board)
(HDS, \$299 & HQS \$379)
- Centronics Parallel Interface \$199
- Prototyping Board-Mac II \$199
- Mac SE/30 Proto Board \$59.95
- Mac SE/30 Extender Board \$49.95
- Mac IIfx Proto Board \$99
- Mac IIfx Extender Board \$99
- Nubus Compression Expansion Board \$995
- ROM Development System \$149

CSI Software Products:

MacForth is a popular interactive programming language environment for the Apple Macintosh computer. It is a full featured environment including a 68000 assembler, integrated text editor, high level graphics, built-in toolbox support, extensive documentation and inline multi-tasking.

First implemented on the Macintosh in early 1984, MacForth was one of the first software products for the Macintosh and enjoys a very large installed base. CSI enhances the product at least annually and has many third party utilities and commercial applications written MacForth.

MacForth utilities and third party products include tools disks 1 and 2, a 3D Graphics Library, Programming For the Rest of Us Book and Orbital Mech (a spaceflight simulator)

Support

Creative Solutions is very proud of the level of service we provide for all of our products. In addition to the hotline, we publish quarterly newsletters, and have a team of experts to answer questions on CompuServe. CompuServe is much more than a technical bulletin board. We have sections for each product line, very active data libraries with many public domain and shareware programs, conferences with the experts and user's group information. We're at **GO FORTH**.

MacForth Price List

MacForth Plus	\$199	MacForth Tools Disk #2	\$30
Relocatable Modules	\$99	MacForth PFRU Book	\$15
MacForth Tools Disk #1	\$30	Orbital Mech	\$49.95
		3D Library	\$25
